Computer Methods and Advances in Geomechanics

Edited by
G. BEER
CSIRO, Division of Geomechanics
J.R. BOOKER & J.P.CARTER
University of Sydney

VOLUME I

Published on behalf of the International Association for Computer Methods and Advances in Geomechanics by
A.A. BALKEMA / ROTTERDAM / BROOKFIELD / 1991
# Table of Contents

**Preface**  
VII

**Keynote papers**

Analytic methods in geomechanics  
J.R. Booker  
3

Australian advances in geomechanics  
E.T. Brown  
15

Constitutive modelling of geomaterials: Comments on past and future  
Chandra S. Desai  
31

Environmental geotechnology: Some pertinent considerations  
R. Kerry Rowe  
35

1. **CAD, Expert systems and software**

An expert system to choose a stress analysis program for rock excavation design  
M.A. Coulthard & V. Ciesielki  
51

Visualization of the microstructural response of lightly-cemented granular soils under uniaxial strain conditions  
John J. Gill & Gregory Donohoe  
57

FE analysis and visualization utilizing X-windows in a distributed supercomputing environment  
W. Haas & R. Brantner  
65

Three dimensional color computer graphics for the subsurface ground layer around Toyohashi  
Makoto Kawamura, Susumu Segawa & Tomomi Arai  
69

Development of an intelligent computer program for foundation design  
Fred H. Kulhawy & Charles H. Trautmann  
75

Three dimensional modeling for geological structure by CAD system  
Ryohei Mura, Nobuo Hoshino & Takashi Ito  
81
Image analysis techniques for determining the fractal dimensions of rock joint and fragment size distributions
A. Ord & C.C. Cheung

Lotus 1-2-3 in permanent displacement
H. V. Phuong Truong

Automatic mesh generation of zero thickness interface elements
D. M. Potts & R. A. Day

Computer aided teaching in geotechnical engineering
S. D. Priest, D. J. Walker & J. N. Kay

A constrained Delaunay triangulation algorithm for generating finite element meshes
S. W. Sloan

A numerical database system for rock triaxial tests using a microcomputer
Naohiko Tokashiki, Yasuaki Ichikawa & Toshikazu Kawamoto

2. Geotechnical engineering applications

Downdrag forces in piles and pile groups
Y. K. Chow & J. T. Chin

Performance of a pile-supported structure under strong ground motion
Phillip L. Gould & Kijun Ahn

Pile-group settlement interaction considering soil non-linearity
H. Hirayama

Three-dimensional finite element analysis of laterally loaded piles
M. Kimura, A. Yashima & T. Shibata

Finite element analysis of embedded walls
S. A. S. Kulathilaka & I. B. Donald

Analysis of novel retaining structures using explicit finite difference codes
Loren J. Lorig

Soil-strip interaction in reinforced foundation beds
Madhira R. Madhav & N. Kumar Pitchumani

Parametric study of deformation behavior of bored pile on a thin bearing layer
Tamoto Matsui & Kazuhiro Oda

Bearing capacity analysis of a raft foundation on soft clays depending on soil-structure interaction
Satoru Ohtsuka & Minoru Matsuo

Analysis of piled strip foundations
H. G. Poulos

Deformation analysis of improved soft ground under embankment
A. Sakai, N. Miura, G. Aramaki & K. Koga
Mechanical behaviour of bottom ground heave due to excavation  
T. Tamano, S. Fukui, S. Kadota & K. Ueshita 

Behaviour of axially loaded piles in Gibson soil 
L.G. Tham & Guo Dajiang 

A new approach based on grey system theory for settlement prediction 
S. Zhang, J. Li & R.N. Chowdhury 

A three dimensional nonlinear finite element analysis of stability of dam abutment by using 
fraction-damage mechanics model 
Zhou Wei Yuan, Yang Yan Yi, Yang Ro Zieng & Yan Gong Ri 

3. Experimental studies, testing and field instrumentation 

Finite element analyses of triaxial tests with different end and drainage conditions  
D.W. Airey 

Mechanics of sampling disturbances in a soft clay 
M. Budhu & C.S. Wu 

Numerical modelling of dynamic compaction 
Y.K. Chow, D.M. Young, K.Y. Yong & S.L. Lee 

The structural analysis of pavements: Studies based on the measurements of surface 
deflections 
W.H. Cogill 

Calculation and method of verification of the 3-D insitu stress tensor 
W. Lawrence & G. Sneddon 

Application of a 1-dimensional cavity expansion model to pressuremeter and piezocone tests 
in clay 
A. Lee Goh & M. Fahey 

Dynamics of SPT: Application of the method of two-point strain measurements  
T. Matsumoto, H. Sekiguchi, H. Yoshida & K. Kita 

PC-based data acquisition and electrohydraulic servo loading systems in laboratory shear 
testing 
K.K. Ng & I.B. Donald 

Design strength $S_u$ derived from pressuremeter tests 
H. Ohta, A. Izuka, A. Nishihara, R. Fukagawa & Y. Morita 

Numerical and centrifuge modelling of large strain consolidation 
S.H. Toh & M. Fahey 

Pore pressure fields around piezocone penetrometers installed in clays 
Andrew J. Whittle & Charles P. Aubeny
4. Joints, localisation and structured materials

Boundary element analysis of excavations in aelotropic rock masses

H. Alshossein & J.P. Carter

The structure of persistent shear bands in idealized granular media

J.P. Bardet & J. Prouzet

Rate-type and elastoplastic approaches for soil-structure interface behaviour:
A comparison

M. Boulet & A. Jarzebowski

An elastic-viscoplastic block theory for rock masses

S.H. Chen & W.L. Xiong

Distinct elements vs Cosserat theory: A comparison for the case of an infinite shear layer

S.K. Choi & H-B. Muhlhaus

Disturbed state concept for modelling soils and joints

C.S. Desai, S. Armaleh, D. Katti & Y. Ma

Model of regularly jointed rock mass with consideration of the influence of couple stresses

Ge Xiuren & Feng Shuren

The equivalent elastic properties of stratified and jointed rock masses

Charles Gerrard

Quantifying soil properties using fractal measurements of soil microstructure

Steven G. Harris & John J. Gill

Blasting effects in jointed rocks – New insights

F.E. Heuze, T.R. Butkovich, O.R. Walton & D.M. Maddix

Rank n plasticity theory and bifurcation condition

Y. Ichikawa & T. Ito

Probabilistic joint network modelling in three dimensions including a verification

P.H.S.W. Kulatilaka, D.N. Wathugala & O. Stephansson

Modelling of sliding behaviour at rock interfaces

E.C. Leong & M.F. Randolph

Fractals in geomechanics

Charles A. Moore, Monica Krepfl, Hui-Huang A. Chyou & John Gill

Constitutive models and numerical analyses for inelastic materials with microstructure

H-B. Muhlhaus, R. de Borst & E.C. Aifantis

Numerical verification of sheet-pile countermeasure in soft ground

Fluid flow through patterned shear zones

A. Ord

Numerical analysis of progressive failure in deep boreholes

P.C. Papanastasiou & I.G. Vardoulakis
On mechanics of jointed media: Masonry and related problems
S. Pietruszczak

Approximate equivalent moduli for use in the modelling of mining in elastic layered strata
J.A. Ryder & M.U. Ozhay

Localization examined as a function of mesh configuration and load step
Suren Saxena, T.S. Hsu & C.T. Liu

A damage model for discontinuous rock mass based on thermodynamic principles
M. Stumvoll, T. Kyoya, Y. Ichikawa & G. Swoboda

Analysis of a dam foundation with jointed rock mass
A. Varadarajan & Anjani Kumar

Continuum models for localized deformations in pressure sensitive materials
I. Vardoulakis, H.-B. Mühle, & E. Afantis

A finite element approach to analysing localization and post-critical behaviour in rock
P.M. Warburton

Effects of anisotropy on three dimensional excavation analysis of jointed rock masses
Tadashi Yamabe, Masanobu Oda, Keisuke Maekawa, Yoshio Ishizuka, Hiroyo Kumasaka & Hiroyuki Tada

5. Slopes, stability and distinct element methods

Analysis of seepage failure of sandy soils, a coupling problem approach
A. Asaoka & T. Kodaka

An integrated system for the stability of rock slopes
Ö. Aydan, Y. Ichikawa, Y. Shimizu & K. Murata

Upper bound solutions to soil stability problems via general wedge methods
P.S. K. Giam & I.B. Donald

Simulation analysis of dynamic nonlinear behavior of underground structures by the extended distinct element method
M. Hakuno & T. Yamamoto

Nonassociated flow and instability of slopes
Poul V. Lade

Numerical analysis of the collision between a falling rock and a cushion by distinct element method
H. Masuya & Y. Kajikawa

Slope stability analysis by shear strength reduction technique
T. Matsui & K.C. San

Open pit toppling failures: Experience versus analysis
Christopher M. Orr, Christopher F. Swindells & Christopher R. Windsor

Simple shear simulations of sand using D.E.M.
Sumio Sawada, Tej B.S. Pradhan & Yoshinori Iwasaki
The stability of a square tunnel in a purely cohesive material whose strength increases linearly with depth
S.W.Sloan & A.Assadi

Analyses of active earth pressure problems based on simple constitutive equations for granular materials
K.Ugai

6. Constitutive modelling

Finite element analysis with strain-softening constitutive model
Toshihisa Adachi, Feng Zhang, Fusao Oka & Atsushi Yashima

Double structure model for the prediction of long-term movements in expansive materials
E.E.Alonso, A.Gens & A.Lloret

Partially drained behaviour of soft clays and its application
A.Asaoka & M.Nakano

A model for recent history and non-linearity in the stress-strain behaviour of overconsolidated soil
J.H.Atkinson & S.E.Stallebrass

An anisotropic stress-strain model for sand
Upul D.Atukorala & Peter M.Byrne

Determination of constitutive parameters for soils based on optimization
K.Axelsson, Y.Yu, K.Runesson & M.Klisinski

Numerical model for elastic-viscoelastic-viscoplastic behaviour of bituminous concrete
P.G.Bonnier & E.Troost

Use of incrementally non linear constitutive equations by the finite element method
Marc Boulon, Félix Darve, Hamid El Gamali & Jean Pierre Touret

Evolution of shear modulus and fabric during shear deformation
Yao-Chung Chen & Hsiu-Yen Hung

On the mechanics of state parameter models for sands
I.F.Collins

Constitutive law for granular skeleton materials: Description of the anisotropic and viscous effects
H.Di Benedetto & O.Hameury

A comparative study of incremental non-linear constitutive equations
T.Doanh & P.Royis

Validity of using triaxial test data for calibration of constitutive relationships
A.B.Fourie

Degradation instabilities in brittle material structures
G.Frantziskonis
Noncoaxiality and stress-dilatancy relations for granular materials
Marte Gutierrez, Kenji Ishihara & Ikao Towhata
625
Elastoplastic constitutive modelling for unsaturated soils
Yuji Kohgo, Masashi Nakano & Tsuyoshi Miyazaki
631
Constitutive model for frictional materials with application to concrete
Poul V. Lade & Moonkyum Kim
637
Constitutive modeling of Ottawa sand by strain path tests
John F. Lupo, Nancy C. Patti & Thomas W. Thompson
643
Constitutive model for coal under high stresses and temperatures
H. Meißner & F. Roegnun
649
Kinematic hardening model for clay in three-dimensional stresses
T. Nakai & T. Hoshikawa
655
A generalized plasticity model for anisotropic behaviour of sand
M. Pastor
661
Microplane constitutive model for inelastic behavior of soils
Pere C. Prat & Zdeněk P. Bařant
669
A three dimensional constitutive elasto-plastic model for sands following the 'Spatial
Mobilized Plane' concept
F. M. Salgado & P. M. Byrne
675
Creep behavior of fine-grained ocean sediments
683
A micromechanical theory of plastic non-local behavior of granular media
K. C. Valanis & John Gill
689
MIT-E3: A constitutive model for overconsolidated clays
Andrew J. Whittle
697
Numerical solution of ultimate bearing capacity of shallow strip footing on anisotropic and
nonhomogeneous clays
Xu Gancheng, Zhen Yingren & Xie Dingyi
703
Constitutive modeling of Pueblo sand
M. Musharraf Zaman & M. Omar Faruque
709
Multi-yield surface theory for soils
Zheng Yingren
715

7. Dynamics and cyclic loading

Vertical vibration of single piles in radially inhomogeneous soil
Huei-Tsyr Chen & Gin-Der Chang
723
Influence of radiation damping on pile driving
Nawawi Chouw & Günther Schmid
729
Evaluation of the inelastic response of an axisymmetric foundation to impact loading
A.J. Deeks & M.F. Randolph

A numerical model for the stability analysis of off-shore embankments in storm wave conditions
G. P. Giani & A. M. Ferrero

Thin layered element method for estimation of ground vibrations due to traffic loads
Toshokazu Hanazato, Keizo Uga, Michio Mori & Rikuo Sakaguchi

Model of cyclic behaviour of calcareous sand and its application to wave loading
W.S. Kaggwa & J.R. Booker

Vibrations of the ground surface around rigid structures brought about by waves radiated from an adjacent source
Y. Kitamura

Numerical investigation on the deformation of a marine foundation subjected to caisson-composite breakwater construction
M. Mimura, T. Shibata & S. Ohmaki

Coupled finite and infinite elements in the dynamic analysis of geotechnical structures
C.S. Pan

The effect of residual stresses in interpreting stress wave data
M.F. Randolph

Model for cyclically loaded clay based on critical state theory
E.J. Sellers & F. Scheele

Finite element analysis of pore pressure build-up beneath offshore gravity structures
E.X. Song & A. Verruijt

Analytical formulations and a numerical procedure for analysis of non-uniform piles subject to vibration
H.H. Vaziri & J. Xie

Surface Green’s functions for continuously nonhomogeneous soil
C. Vrettos

Calculation of bottom plate of turbine framed foundation considering frame foundation/soil interaction
J.R. Zhang & B.Z. Kang

Blasting induced vibrations in discontinuous rock
G. Zenz, Li Ning & G. Swoboda

Analytical theory of seismic pore pressure generation-dissipation in saturated sand layer
Zhang Jianmin, Xie Dingyi & Liu Jiapai
