</table>
5.3.2 Field estimates of JCS
5.3.3 Influence of scale on JRC and JCS
5.4 Shear strength of filled discontinuities
5.5 Influence of water pressure
5.6 Instantaneous cohesion and friction

6 Analysis of structurally controlled instability
6.1 Introduction
6.2 Identification of potential wedges
6.3 Support to control wedge failure
   6.3.1 Rock bolting wedges
   6.3.2 Shotcrete support for wedges
6.4 Consideration of excavation sequence
6.5 Application of probability theory

7 In situ and induced stresses
7.1 Introduction
7.2 In situ stresses
   7.2.1 The World Stress Map
   7.2.2 Developing a stress measuring programme
7.3 Analysis of induced stresses
   7.3.1 Numerical methods of stress analysis
   7.3.2 Two-dimensional and three-dimensional models
   7.3.3 Stress analysis using the program PHASES

8 Strength of rock and rock masses
8.1 Introduction
8.2 Definition of the problem
8.3 Strength of intact rock
8.4 The strength of jointed rock masses
8.5 Use of rock mass classifications for estimating GSI
8.6 When to use the Hoek-Brown failure criterion

9 Support design for overstressed rock
9.1 Introduction
9.2 Support interaction analysis
   9.2.1 Definition of failure criterion
   9.2.2 Analysis of tunnel behaviour
   9.2.3 Deformation of an unsupported tunnel
   9.2.4 Deformation characteristics of support
   9.2.5 Estimates of support capacity
   9.2.6 Support interaction example
9.3 The PHASES program
   9.3.1 Support interaction analysis using PHASES

10 Progressive spalling in massive brittle rock
10.1 Introduction
10.2 Examples of spalling in underground excavations
10.3 The AECL Underground Research Laboratory
   10.3.1 In situ stresses at 420 level
   10.3.2 Properties of Lac du Bonnet granite
   10.3.3 URL Rooms 413 and 405
   10.3.4 URL Test tunnel
Table of contents

10.4 Example from El Teniente Mine, Chile 119
10.5 South African experience 120
10.6 Implications for support design 124
  10.6.1 Rockbolting 124
  10.6.2 Shotcrete 125
  10.6.3 Discussion 125

11 Typical support applications 127
  11.1 Introduction 127
  11.2 ‘Safety’ support systems 127
  11.3 Permanent mining excavations 131
  11.4 Drawpoints and orepasses 132
  11.5 Small openings in blocky rock 136
  11.6 Small openings in heavily jointed rock 138
  11.7 Pre-support of openings 142
    11.7.1 Cut and fill stope support 143
    11.7.2 Pre-reinforcement of permanent openings 146
    11.7.3 Reinforcement of non-entry stopes 149

12 Rockbolts and dowels 152
  12.1 Introduction 152
  12.2 Rockbolts
    12.2.1 Mechanically anchored rockbolts 152
    12.2.2 Resin anchored rockbolts 156
  12.3 Dowels
    12.3.1 Grouted dowels 158
    12.3.2 Friction dowels or ‘Split Set’ stabilisers 159
    12.3.3 ‘Swelllex’ dowels 160
  12.4 Load-deformation characteristics 161

13 Cablebolt reinforcement 165
  13.1 Introduction 165
  13.2 Cablebolt hardware 165
  13.3 Cablebolt bond strength 167
  13.4 Grouts and grouting 168
  13.5 Cablebolt installation 171
  13.6 Modified cablebolts 174

14 The Stability Graph method 176
  14.1 Introduction 176
  14.2 The Stability Graph method
    14.2.1 The stability number, N’ 176
    14.2.2 The shape factor, S 180
    14.2.3 The stability graph 180
  14.3 Cablebolt design 181
  14.4 Discussion of the method 182
  14.5 Worked stability graph example
    14.5.1 Structural geology 183
    14.5.2 Q’ classification 183
    14.5.3 Preliminary stope design 184

15 Shotcrete support 190
  15.1 Introduction 190
15.2 Shotcrete technology 190
  15.2.1 Dry mix shotcrete 190
  15.2.2 Wet mix shotcrete 191
  15.2.3 Steel fibre reinforced microsilica shotcrete 192
  15.2.4 Mesh reinforced shotcrete 194
15.3 Shotcrete application 195
15.4 Design of shotcrete support 198
