Foundations and Slopes
An introduction to applications of critical state soil mechanics

J. H. ATKINSON
Reader in Soil Mechanics and Head of the Division of Geotechnical Engineering,
The City University, London
# Natural Soils in Foundations and Slopes

3.1 Introduction ................................. 8
3.2 Formation of natural soils ................. 8
3.3 States of stress in the ground ............... 8
3.4 Overconsolidation of natural soils ......... 9
3.5 Profiles of water content and strength for natural soils .... 9
3.6 Loading of soil in foundations and slopes .... 9
3.7 Investigations, sampling, and testing ....... 9
3.8 Analysis of soil structures ................. 10
3.9 Selection of strength parameters for design .... 10
3.10 Factor of safety ......................... 10
References .................................. 10
Worked examples ............................. 10

# Theorems of Plastic Collapse and their Application to Soil Structures

4.1 Introduction ................................ 105
4.2 Principle of virtual work ................. 105
4.3 Theorems of plastic collapse ............ 111
4.4 Use of bound theorems for the collapse of a beam .... 114
4.5 Failure criteria for soils ............... 116
4.6 Mechanisms for plane plastic collapse .... 118
4.7 Increments of work done during plastic collapse .... 122
4.8 Displacement diagrams ................. 125
4.9 Slip fans .................................. 126
4.10 Discontinuous stress states ............ 130
4.11 Stress fans ............................... 135
4.12 $\alpha$ and $\beta$ discontinuities ........... 141
4.13 Summary ................................ 143
References .................................. 145

# Undrained Stability of Soil Structures

5.1 Introduction ................................ 146
5.2 Bound calculations for undrained loading .... 148
5.3 Undrained stability of cuts and slopes .... 149
5.4 Undrained stability of a smooth retaining wall .... 158
5.5 Undrained stability of a foundation .... 164
5.6 Undrained stability of a rough retaining wall .... 177
5.7 Effect of external water pressures ...... 180
5.8 Discussion ................................ 185
References .................................. 185
Worked examples ............................. 185
## 6. Drained Stability of Soil Structures

- **6.1 Introduction**
- **6.2 Bound calculations for drained loading**
- **6.3 Stability of slopes in dry soil**
- **6.4 Drained stability of a smooth wall**
- **6.5 Drained stability of a foundation**
- **6.6 Bound calculations for saturated soil**
- **6.7 Drained stability of a rough retaining wall**
- **6.8 Discussion**
- **6.9 References**
- **6.10 Worked examples**

## 7. Associated Fields and Slip Line Methods

- **7.1 Introduction**
- **7.2 Relationships between stress and strain in a perfectly plastic material at failure**
- **7.3 Stress field calculations for undrained loading**
- **7.4 Stress field calculations for drained loading**
- **7.5 Displacement field calculations**
- **7.6 Associated fields calculations**
- **7.7 Slip line sketching for undrained loading**
- **7.8 Slip line solutions for undrained loading**
- **7.9 Slip line sketching for drained loading**
- **7.10 Slip line solutions for drained loading**
- **7.11 Discussion**
- **7.12 References**
- **7.13 Worked examples**

## 8. The Limit Equilibrium Method

- **8.1 Introduction**
- **8.2 The theory of the limit equilibrium method**
- **8.3 Limit equilibrium solutions for retaining walls**
- **8.4 Graphical methods for limit equilibrium calculations**
- **8.5 The slip circle method for undrained loading**
- **8.6 The slip circle method for drained loading — the method of slices**
- **8.7 General limit equilibrium solutions**
- **8.8 Factor of safety**
- **8.9 Discussion**
- **8.10 References**
- **8.11 Worked examples**
9. Routine Methods for Stability Calculations

9.1 Introduction
9.2 Bearing capacity factors for undrained loading
9.3 Stability numbers for undrained loading
9.4 Earth pressure coefficients for undrained loading
9.5 Bearing capacity factors for drained loading
9.6 Stability numbers for drained loading
9.7 Earth pressure coefficients for drained loading
9.8 Discussion
References
Worked examples

10. Settlement of Foundations

10.1 Introduction
10.2 Drained and undrained loading of foundations
10.3 States of stress in elastic soil
10.4 Standard solutions for foundations on elastic soil
10.5 Influence factors for stress and displacement
10.6 One-dimensional loading of elastic soil
10.7 Consolidation settlements
10.8 Rate of consolidation of foundations
10.9 Stress path methods
References
Worked examples

11. Concluding Remarks
